To Whom it May Concern

Reference for Global MSC Security

South Gloucestershire Council first appointed Global MSC Security in 2007 to design, procure and then project manage the installation of a six camera CCTV system in Hanham, Bristol. This project was delivered within very tight timescales and on budget. We have since used MSC to report on, design and project manage a number of CCTV upgrades and installations throughout the South Gloucestershire area and most recently a £325,000 upgrade to install the council's own fibre optic duct network and camera system linked to a neighbouring authority's control room. This too was delivered within the required criteria we had set. They have since compiled a CCTV Strategy for the council which has recently been adopted setting out our vision for the next 10 years.

Global MSC's communications ability, extensive technical knowledge and their visionary approach to projects has enabled South Gloucestershire Council to create a CCTV security system which is more cost effective and efficient than was previously the case and one that we are proud to publicise as an example of how things should be done .

I would be happy to recommend Global MSC Security for similar projects.
